PROFILE

Financial economist and developer with ten years at a financial advisory firm, where I am now responsible for the information behind more than 1,800 contracts and about 2,000 investment accounts across 30 custodians. I designed and built the internal platform the firm uses to operate and report, which cut the area's process times by up to 60 % and replaced paid software. On my own I build independent apps, one of them in testing on Google Play. I am drawn to the point where a business process can be measured, automated and explained with numbers people can trust.

PROFESSIONAL EXPERIENCE

Information Manager NSC Asesores · Mexico City *July 2019 to present*

- Bring together the firm's securities information (transactions, positions, prices and account statements) and deliver it to accounting, control, sales and the advisor network.
- Designed and built NSC Portal, the internal platform the firm now uses to operate, report and analyse. It brings five applications under a single sign-in with per-person permissions, and it replaced three desktop tools that had no access control.
- Cut the area's operational process times by up to 60 % by replacing manual review in Excel with automated extraction, validation and reporting.
- Automated the reading and reconciliation of account statements from 30 domestic and international custodians, which used to be checked by hand.
- Built the firm's wealth reports, with wealth by client and by advisor, net new money separated from market effect, and returns by currency, in PDF, PowerPoint and Excel reports that produce themselves.
- Replaced software licences with in-house development for PDF editing with digital signing, process modelling and exchange-traded fund composition analysis.
- Designed the area's information governance framework, with 12 policies, role definitions and a responsibility matrix, and led the update of the Portal Access and Use Policy.

IT Support Assistant NSC Asesores · Mexico City *July 2017 to May 2019*

- User support and administration of internal equipment and systems. First automations on the area's operational databases.

Social service in Anti-Money Laundering Sociedad Hipotecaria Federal *2023*

- Cleaned and consolidated databases for client risk analysis and for financial risk assessment models. Social service is a graduation requirement at Mexican universities.

INDEPENDENT PROJECTS

IDóneo Android and web app · in closed testing on Google Play *2026*

- Turns a photo of an ID card or passport into a scan-quality PDF at true size. It guides the person taking the photo until light and framing are right, works offline and does not store the images. A web version covers iPhone users.

CFA study platform Web app for exam preparation *2026*

- Decides what to study based on the time left before the exam, simulates the real exam and reproduces the two permitted financial calculators. I use it in my own Level I preparation.
